

Keepance

● Version 3.0 · live today

The private intelligence layer for a law practice.

The private place your whole practice lives and answers you back.
Your clients' data never leaves your control, and every answer is cited.

● Local-first AI

● Word-native

● Cited & verifiable

● Built for litigation

Every lawyer fights the same three things, every single day.

These are the real incumbents. Not Notion, not another note app. Three tools that fail at the worst moment.

Outlook search that can't find anything

You know you emailed it. You just can't get it back. The one document you need is buried in ten years of mail.

The legal pad you carry into deposition prep

Reading hundreds of pages by hand, hunting for the one contradiction. The documents are your weekends.

The ChatGPT you're afraid to paste a client's name into

The AI that could help is the one you can't use, because the moment you paste privileged work, you've lost control of it.

— WHAT KEEPANCE IS

Ask a plain question. Get the exact email or document back, **with a citation you can click and verify.** Privately.

That moment is the whole product. A lawyer in our research called it "the reason I'd actually pull out a credit card."

We stopped selling a "workspace." We started selling an outcome.

Keepance 1.0 to 2.x

"A local-first AI workspace for confidential work."

Abstract. It sounded cloudy and corporate. It dropped us into a fight with Notion and Obsidian, on the wrong axis, against the wrong enemy.

Keepance 3.0

"The private intelligence layer for a law practice."

Concrete. It names the customer, the job, and the promise. Word is the format. Citations are the price of admission. Lawyers never see code, and never see Markdown again.

This single reframe drives every decision that follows.

Get in the door. Become indispensable. Finish the work.

Viability is a sequence, not a feature list: a job that wins the first five minutes, a job that gives lawyers their weekends back, and a job that ships the real deliverable.

1

Find anything, privately

Cited recall across your email, documents, and past matters. The daily, universal pain. This is the wedge that gets the credit card out.

2

The tireless associate

Surface every contradiction across transcripts and emails, build the timeline, triage discovery, spot the issues. It flags, you verify. Every claim cited.

3

Real Word deliverables

Draft, redline, and ship in Microsoft Word and PDF, on your letterhead, with tracked changes intact. The place work gets finished, not just started.

You ask. It answers from your own files, and shows its work.

● ● ● keepance · matter: Hartley v. Coastal Logistics

● This is going to: your machine only

You

Did the defendant ever admit the shipment left the dock before the inspection?

Yes. In his deposition he testified the truck "was already loaded and gone by the time the inspector showed up," which contradicts his signed incident report stating the inspection happened first.

✓ Tr. 45:12

✓ incident-report.docx

CITATIONS

● Verified against source on disk

click to open the exact passage

If it can't ground an answer in your files, it refuses rather than guessing. No hallucinations dressed up as confidence.

Four moats a funded competitor cannot simply copy.

Moat 01

Confidentiality you control

Microsoft Copilot can't promise "we never see your data." Their architecture depends on seeing it. Ours doesn't. That's structural, not a feature race.

Moat 02

Honesty as the brand

We tell lawyers the literal truth about where every byte goes, before they find it themselves. For people who read fine print for a living, that wins.

Moat 03

Data gravity

Once your whole practice is ingested and privately searchable, leaving is unthinkable. The longer they use it, the more it is the brain of the practice.

Moat 04

Proof that compounds

Trust in law travels lawyer to lawyer. Named advocates, bar-section credibility, and firm assurance. Each vouch lowers the cost of the next ten.

You choose how private each matter is. We prove it on screen.

Confidentiality is a spectrum the lawyer controls per matter, with an always-visible egress indicator and a one-screen data map you can hand to a worried client.

Local-only

nothing leaves

Runs on a model on your own machine. Nothing ever leaves the building. Paranoid mode for the most sensitive matter.

Your key, direct

no middleman

Your own AI key. Requests go straight from your machine to the provider, never through a Keepance server. No markup on usage, ever.

Assured

firm-grade

A zero-retention, single-tenant route for firms, with a signed agreement so a risk committee can say yes. Proven to retain nothing.

Land with the solo. Grow into the firm.

The confidentiality-anxious solo is the on-ramp: cheap to reach, and the distribution engine, because lawyers adopt what other lawyers vouch for. The center of gravity is the small and mid-size, litigation-heavy firm, where the pain is deepest and the budgets are real.

Solo

the wedge that spreads

→ Firm

where durable revenue lives

Law first

depth beats breadth

The expansion path

Search → analysis → drafting → the whole matter → the whole firm.

- ✓ A solo finds an email in seconds and tells their bar section.
- ✓ They tear through a deposition over a weekend that used to take days.
- ✓ They bring it to their firm. The firm needs shared matters and ethical walls.
- ✓ Now it's the intelligence layer for the whole practice.

Seven pillars: three that win the customer, four that keep them.

01

Ingest everything

Email, documents, PDFs with OCR, prior matters, transcripts. Encrypted, resumable, private.

02

Cited recall

Ask in plain English, get the exact source back with a verifiable citation.

03

The litigation associate

Contradiction finder, timeline, privilege log, issue spotter. All cited, all propose-don't-decide.

04

Office-native deliverables

Word, PDF, Excel with full fidelity. Track changes, styles, tables, letterhead.

05

Trust & confidentiality

The spectrum, the egress indicator, the data map, audit trail, privilege tagging.

06

Team & firm layer

Shared matters, ethical walls, multi-seat, the firm assurance package.

07

Fits your stack

Sits beside Clio, Outlook, Word, and firm document management. It never replaces your system of record.

The shape

Wedge → depth → close.

Pillars 1-3 win the lawyer. Pillars 4-7 make it defensible and let it grow to a firm.

Land and expand, priced for the sequence.

A genuine free trial with no card on the on-ramp, then honest per-seat annual pricing. Solos spread the word. Firms pay the bills. Data gravity keeps both.

SOLO

\$468 / year

The confidentiality-anxious solo. The wedge, the trial, the credit-card moment.

- + Cited private recall
- + Word-native drafting
- + Local-only & bring-your-own-key

The working lawyer

PROFESSIONAL

\$948 / year

The depth and the deliverables. The litigation associate, the practice packs.

- + Everything in Solo
- + Contradiction finder & analysis
- + Full deliverables suite

FIRM

Version 3.0 is real, signed, selling, and proven on a real machine.

This is not a prototype. The hard two-thirds of the vision (the Word engine, cited retrieval, refuse-rather-than-hallucinate, encryption at rest, the encrypted firm tier) is built and verified.

- ✓ **v3.1.0 published and live**, with signed installers for Windows, Mac (Apple Silicon and Intel), and Linux, plus automatic updates.
- ✓ **The magic moment, witnessed end to end on a real machine**: a cited answer over your own files, click to verify, contradiction found, exported to Word.
- ✓ **In-house Word engine**: open a .docx, let the AI redline it with tracked changes, send it back. No Markdown, ever.
- ✓ **Matter isolation**: a question about one client can never return another client's files. Enforced by cryptography, not by hiding.
- ✓ **All three privacy modes live**, including Assured mode proven to retain nothing against the live backend.
- ✓ **OCR for scanned filings**: court-stamped paper and faxes are now searchable, fully on your machine.
- ✓ **Word, Excel and PowerPoint content searchable**, plus deposition transcript citations down to the line ("Tr. 45:12").
- ✓ **Encrypted firm tier live** at api.keepance.com: shared matters, ethical walls by key denial, real subscriptions selling.

A board mandate: complete the vision document. Zero exceptions.

Wave 1 · done

Prove the wedge, harden the basics

shipped

The flagship moment verified on a real machine. Nine first-run defects found and fixed. Memory, citations, and click-to-source all green.

Wave 2 · ~done

Ingest everything

shipped

OCR, Office-document content into the index, transcript line citations, at-rest path encryption, Assured zero-retention proven live, letterhead, the issue spotter.

Wave 3 · next

The firm-sale layer

building

Single sign-on (Microsoft Entra ID, then Google), and a real encrypted workspace vault with recovery and admin escrow.

Wave 4 · next

Live co-editing

building

Multiple lawyers editing the same Word document at once, end-to-end encrypted, with tracked-change attribution and offline convergence.

Wave 5 · next

Fits your stack, for real

building

Connectors: Clio first, then Word and Outlook add-ins, then NetDocuments and iManage. Positioning becomes real integration.

Two-thirds built and verified. And it's the hard two-thirds.

We will only claim a feature on the website the day it ships. That rule is the brand. It is why this deck separates what is live from what is coming, and why a firm's diligence will find the claims true.

~66%

of the vision built & verified

5 waves

to 100%, zero exceptions

Vision coverage

— THE ONE-SENTENCE TEST

"It's the private place my whole practice lives, it finds anything I've ever emailed or filed in seconds, it helps me tear through depositions, and my clients' data never leaves my control."

If a senior litigator says that to the lawyer in the next office, we've won. Everything we build is in service of making that the sentence lawyers actually say.

Private by architecture. Cited by default. Built for the way lawyers actually work.

Live and selling today. On a clear, funded path to completing the entire vision, with nothing claimed before it ships.
